Jorge Arcoya López y Eduardo Valero Molina

Jorge- Hi, how are you today?

Eduardo- good thanks for asking

Jorge- I think that the weather is nice today, what do you think?

Eduardo- It is a very hot climate because of climate change

Jorge- I wanted to talk to you about a topic I have some doubts about.

Eduardo- What is the topic you want to discuss?.

Jorge- The topic is the web evolution. What do you think about this topic?

Eduardo- It is a good topic in relation to the current version of the web, which is 3.0, which tries to obtain the best communication through three-dimensional vision and smart devices, .Also, an example are assistants like Alexa and Google, which are programmed in this version to be able to communicate with the user and the whole metaverse thing.

Jorge- Yes, it is a good point since it has evolved compared to 1.0, which were more static web pages and only allowed you to read their websites as they were unidirectional websites.

Eduardo- The future of the web is 4.0 because the prototype of this is to adapt and make users interact with the web

Jorge- I agree with you because this next version of the web offers you many services that web 2.0 does not offer, such as high interactivity between devices, software and humans in such an autonomous way, although in version 2.0 was where web pages like Facebook, YouTube, Wikipedia, Twitter were developed without which today many aspects of our lives would be different.

Eduardo- But that's not all, because 5.0 offers you everything that 4.0 has and more.

Jorge- Can you explain that to me?

Eduardo- Web 5.0 wants to have all the features of everything in one device and also tries to characterize emotions, one of the possible new features that version 5.0 could bring is headphones that allow interaction with content that responds to emotions. These are devices that allow the user to interact with content that adapts to their emotions or change the facial expression of an "avatar" in real time.

Jorge- It's a good point, but I see it another way. I think that 6.0 offers you everything you've told me and it will also be the phase that achieves a complete union between the physical and digital world, allowing, among other things, to control devices and web applications directly from the brain.

Eduardo-I agree with you but it has to take a long time until it happens since these assumptions are fictitious.

Jorge- Could version 7.0 also have many of these features that the older versions have?

Eduardo- Good question, because version 7.0 could get to the point where we can use our device in such a way that we don't notice the difference between the digital and the real thing, do you agree with that?

Jorge- Yes, that seems like a good point to me, but since it is such a new version and so little is known about it, I wouldn't be able to tell you anything exactly.

Jorge- In summary, the web has evolved a lot since the early days that were static and will continue to evolve in the coming years, so thanks for the chat, it was a pleasure talking to you.

Eduardo-The pleasure is all mine

Jorge- See you later.

Eduardo- goodbye
